PROFESSIONAL SUMMARY

BI Engineer with nearly 4 years of experience in the Business Intelligence space, specialising in Power BI architecture, advanced DAX, and scalable data solutions. Proven ability to engage with business stakeholders, translate complex requirements into technical BI solutions, and own end-to-end delivery across multiple domains. Strong SQL skills with hands-on experience in semantic model development, RLS implementation, performance tuning, and BI governance.

WORK EXPERIENCE

Solutionec - Bangalore, India | Oct 2022 – Present

Software Development Engineer (BI)

- Built and owned the **Cross-Functional BI Platform** - designed, developed, and maintained Power BI workspaces, semantic models, reports, and apps used daily by **30+ Sales Managers** and on-field representatives across the organisation - eliminating siloed reporting and establishing a unified, governed data layer.
- Quantified **20% reduction in manual reporting time** through structured data analysis - delivering actionable insights that directly influenced platform adoption decisions by leadership.
- Developed DAX measures, calculated columns, and optimised semantic data models in Power BI Desktop - published and managed reports via Power BI Service with scheduled refresh, row-level security, workspace governance, and CI/CD deployment pipelines across Dev/Test/Prod environments.
- Wrote and optimised SQL queries, CTEs, and views to extract and transform data from Snowflake and Databricks for Power BI reporting - ensuring data accuracy and consistency across dashboards.
- Performed data validation and quality checks across reporting pipelines - troubleshot and resolved issues related to Power BI semantic models, dataset refresh failures, and report performance bottlenecks.
- Gathered reporting requirements from business stakeholders, translated them into technical specifications, ideated BI solutions collaboratively with cross-functional teams, and maintained documentation of data models, reporting logic, and business definitions.
- Collaborated with data engineering, consulting, and analytics teams on ETL pipeline design and data transformation workflows - continuously enhanced existing BI systems to support scalable, reusable reporting solutions aligned to evolving business needs.

PROJECT EXPERIENCE

Clinical Patient Journey & Engagement Dashboard | Oct 2025 – Present

- Developed a patient analytics solution using Databricks, Databricks BI, and Power BI — engineered end-to-end data pipelines to transform and prepare structured healthcare datasets for reporting and trend analysis.
- Built interactive dashboards for patient trends and engagement analysis — implemented validation checks to ensure data accuracy, consistency, and compliance across reports.
- Currently tracking key patient engagement metrics including visit frequency, follow-up adherence, and care pathway progression — solution actively used by clinical and operations teams for patient trend monitoring.

Sales Pipeline & CRM Performance Dashboard | Apr 2025 – Oct 2025

- Built and maintained dashboards integrating Salesforce, Snowflake, and operational data sources — developed KPIs for pipeline tracking, lead conversion rates, and sales funnel performance.
- Improved BI performance through query optimisation and enhanced semantic data modelling — reduced ad hoc reporting requests from sales teams by providing self-serve visibility into pipeline health, conversion trends, and funnel drop-offs.

Pharma Sales Performance & Territory Analytics | Nov 2023 – Jul 2024

- Designed and developed a multi-source sales performance dashboard using Snowflake and Power BI — integrated sales, product, and territory datasets into a unified semantic model.
- Built advanced DAX measures for KPIs including sales growth, target achievement, and territory performance — optimised report performance through star schema design and query tuning.
- Enabled sales leadership to monitor territory-level performance in real time — replaced manual Excel-based reporting and supported target review cycles with reliable, automated KPI tracking across regions.

PERSONAL PROJECTS

DataChat - AI-Powered Analytics Assistant (2026)

Stack: *Python, Streamlit, Groq LLaMA 3.1, Pandas, Plotly, HTML*

- Built an AI-driven analytics tool enabling natural language interaction with structured datasets - LLM generates and executes pandas code locally, ensuring raw data never leaves the environment.
- Designed a metadata-only prompt architecture for enterprise AI governance - schema sent to LLM, never row-level data - enabling safe deployment in governed data ecosystems.
- Implemented a self-healing retry loop that evaluates LLM output quality and automatically corrects failed code with no user intervention required.

TECHNICAL SKILLS

Power BI: Power BI Desktop, Power BI Service, DAX (Advanced), Semantic Models, Data Modelling, RLS, Performance Tuning, Workspace Management, Deployment Pipelines

Data Platforms & SQL: SQL (Advanced - Joins, CTEs, Stored Procedures, Query Optimisation), Snowflake, Azure Databricks, Data Warehousing Concepts

BI Architecture & Governance: Workspace Architecture, Semantic Model Design, Apps, Access Control, Data Governance, Refresh Management, CI/CD

Tools & Platforms: DAX Studio, Tabular Editor, Measure Killer, ALM Toolkit, Bravo, Excel, Git, PowerApps, Tableau, Databricks BI, Salesforce BI

AI & Automation: LLM APIs, Prompt Engineering, RAG Pipelines, Python, Pandas, Streamlit

Core Skills: Stakeholder Engagement, Requirement Translation, Problem Solving, Technical Documentation, Cross-functional Collaboration

EDUCATION

B.Sc. Computer Science Jun 2017 – Mar 2020

RTM Nagpur University, India

CERTIFICATIONS

- **Power BI Data Analyst Associate** - Microsoft, Jun 2025
- **Hands-On Essentials: Data Engineering Workshop** - Snowflake, May 2025
- **Data Science** - Odinschool, Jun 2022
